DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 24-26, drawn to a method for changing the display based upon the number of wager inputs being equal to a threshold value, classified in class 463, subclass 30.
- II. Claims 9-16, drawn to a method of changing a display based upon the frequency of receiving inputs, classified in class 463, subclass 31.
- III. Claims 17-21, drawn to a method of changing a display based upon the use of the game machine, classified in class 463, subclass 20.
- IV. Claims 22-23, drawn to a method of changing the basic game display after playing a bonus game, classified in class 463, subclass 26.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention I has separate utility such as changing the display based on the number of wager inputs being equal to a threshold values, while Inventions II-IV are directed to changing the display based on other triggering events. See MPEP § 806.05(d).

Art Unit: 3714

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Inventions II and III-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention II has separate utility such as changing the display based on the frequency of inputs, while Inventions III-IV are directed to changing the display based on other triggering events. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention III has separate utility such as changing the display based on the use of a gaming machine, while Inventions IV are directed to changing the basic gaming machine's display after completing a bonus game. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
